As already published on our sites, "Misliša 2014" was successfully implemented. The number of participants was a record: more than 47,000 students from 590 schools (485 primary and 105 secondary). According to information from the school and scores of questionnaires sent, as before, the students and the teachers are very satisfied with both tasks and manner of conducting the competition, and the usual occasional gifts (for students, coordinators and school). Number of observations is negligible. Some of the most common opinion You can look at our websites. As in the previous eight years, in most schools is 13 March of 2014, a kind of mathematical holiday. For the most respected are very precise propositions-instructions for the competition. Unfortunately, the small number of cases are not respected in all propositions and the instructions (especially with respect to documentation), which has made it difficult to work, arranging the data in the application, awarding and writing appropriate documentation (omissions in obezbeđivnu regularity events, negligence in completing the application form and providing required data, illegible writing names, do not read the current notice of competition). We observed that each year a small number of these schools (1%-2%)!

I would like to thank the schools for their participation, especially the coordinators and their assistants who conducted the competition in accordance with the instructions.

Despite enormous work around views of all students answer, writing the results in application-lists, sorting of results and preparation of supporting documentation and additional gifts, reports schools with student outcomes are delivered before the deadline foreseen propositions.

- We reiterate that we are 3/19/2014. The tables published on the website with the correct answers (only when we get out of school all the answer sheets of students).

- On this occasion (two weeks before the deadline) This report is sent (in 2 or 3 shipments) 1) Complete results for all students of the school, where each student enrolled Search results in the application of school (number of points in each group of tasks, and the total number of points), with a note about the possible recognition (reward or praise) - according to the given criteria, 2) table items-term responses to the tests "you Misliša 2014", 2) table of allocated awards (awards and praise) to "Do 2014" with the criteria for recognition, 3) thanksgiving school 4) thanksgiving coordinator 5) letters of thanks to the members of the work team that conducted the competition (if you have been provided with the necessary information) 6) common basic gift for the main coordinator in each school - a collection of tasks with the competition "Misliša 2014" for OS / SS (with a resolution of all tasks) and an additional gift Coordinator - desk calendar "monasteries" for in 2014. year 7) common basic gift for the school library - a collection of tasks "Misliša 2014" (with solutions), 8) further presents some schools (mentioned below desk calendar, one or two exercise books from our series "Materials for young mathematicians," set 12 posters "Math color"), if they meet the requirements according to the propositions from the notification no.5748 of 17.02.2014. (point 5a, b., c), among other things, if they are submitted by the total number of students in the school (this request is in the application of the competition, and was repeated in subsequent notices, published on our sites).

- Lists of winners and commended students by grade (in alphabetical order), in accordance with the published criteria will be posted on our websites. If someone does not want his name published in the list on the site, it shall so notify us no later than 05/04/2014. (up to 12 hours). Creating a ranking of all schools or students for success surrounding possible public disclosure of such schools is not provided propositions. In addition, it is practically impossible (due to the large number of participants in the competition).

- Appropriate recognition of students (awards with diplomas, commendations) will deliver later, in accordance with the terms specified in the user manual (propositions), because preparing these documents (which is ongoing), with respect to their number, it requires a lot of work and time. For a number of
compliments we send only the forms that the students should be commended is clearly filled according to the given sample.  

Allocated a total of 4,021 award (781 awards and commendations 3240).

**Congratulations to the CENIC achieved notable results, especially the winners and Thanks!**

- Students who are at the root level of the competition (13.03.2014) won the maximum number of points (in the second class of 60 points, and other grades of 100 points), qualified for the finals of the republic, which will be held in Belgrade (Decanska no. 6, where the headquarters of "Archimedes"), 27 April of 2014. years (from 14 to 16 hours).

For the results of the finals, in addition to traditional awards (I, II, III) and praise, will additionally be awarded special prizes. Envisaged four such awards (two in the lower grades of elementary school, one in upper primary and one in secondary schools). Depending on the results of the finals is possible to vary the distribution of prizes by level.

Special Prize of the "Archimedes" summer school for young mathematicians in July of 2014. The (Silver Lake or Tara).

Students will solve the final five goals during 90 minutes, with the necessary written explanation. Tasks will be reviewed and results communicated within 3 days. In the event that more students (in the same category), which meet the requirement of the first prize (over 95% of possible points), wins the same number of points (for example, a maximum of 100%), winner of the special prize will be determined by public draw ("the hat") a date to be determined later (when communicating the results of the finals). Final results will be posted on our websites.

Participation in the finals should be required to confirm no later than 20 April of 2014. on the phone "Archimedes": 011/3245-382 or 3245-383. Students who come to the finale "Archimedes" will deliver an appropriate gift and reimburse travel expenses for traveling to and back (on the price of a return bus / train tickets). Accompanying students are not able to provide travel expenses (ticket, per diem), because we do not have the funds.

- **Note about the cost of the competition.** Given the mass and the content of the competition, the costs are very high. For paid membership of 100 (150 dinars) hardly be settled large real costs of implementing the basic level of this competition (Keep in mind that the fee of 100 dinars valid for 4 months, and 150 dinars only 1.5 months). Here are the only major costs: various written notices to all schools in Serbia, stationery and other materials (huge amounts of toner and paper for photocopiers and plain-color, large quantities of envelopes of various sizes), professional and technical preparation of the tests (11 tests, 265 tasks with solutions); certificates (48,000), copy-print tests (48,000) membership cards and notebooks-gifts competition participants (48,000), additional gifts coordinators and schools (2,600 copies of a collection of tasks, desktop calendar 1000, 110 sets of 12 posters "Mathematics in color"); printing forms diploma and praise for students (4800); thanksgiving schools and coordinators (1200) and filling them, thank the members of work teams in schools (over 3000); prizes to students (800 books) fill 780 degrees for Award-winning students, examination answer sheets of students (47,000), sorting and sending the 590 schools (47,000 reports with names and points in all three groups of tasks in the test), packaging materials and a large office expenses (500,000 dinars) taxes and contributions for contract work (20% and 24%), VAT 20% and others.

Purchase and maintenance of equipment (computers, printers and copier machines), various running costs (maintenance facilities, heating, telephones, websites, etc..) And a huge group of experts working in conjunction with this competition does not count! They did not take into account the various overheads. The cost of the final (for awards, commendations, etc.) are generally not covered by membership fees. Donations we had.

- As recommended in the propositions, the school, according to their criteria and financial capabilities, can provide its students-participants "Mislisa in 2014" to give gifts and allocating awards (awards graduate degrees, praise).

- We recall that the interested students, teachers and schools can code "Archimedes" get mentioned z Birke tasks "Mislisa 2014" (with solutions), which (as well as our other similar publications) suitable for award to students.

Attached are some other notifications.

Thank you for cooperation.

Regards,

For "ARCHIMEDES":

Bogoljub Marinković, prof
